# Using Singularity Theory to Analyse a Spatially Uniform Model of Self-Heating in Compost Piles

## Abstract

Fires at industrial composting facilities, such as those storing industrial waste products like municipal solid waste (NSW) and landfills are fairly common. In most cases these are manageable and such incidents are not destructive enough to attract attention beyond these facilities. However, over the years there have been a few notable devastating fires at such facilities.

In each of these industrial processes there is an inherent increase in temperature as a consequence of the biological activity. Indeed such a temperature increase is one of the goals of the composting waste. Elevated temperatures of the order of 70-90 degrees celsius have been documented within a few months (or even a few days) of forming the compost pile. Although the basic theory of spontaneous combustion relating to organic materials is well understood, there has been very little work undertaken with regard to the mechanism for fires involving biological self-heating.

In this work we formulate and investigate a uniformly distributed mathematical model (based upon Semenov's theory) for the thermal response of cellulosic materials in compost pile. The model consists of mass balance equations for oxygen and energy equations. The model incorporates the heat release due to biological activity within the pile. Biological heat generation is known to be present in most industrial processes handling large volumes of bulk organic materials. we utilize dynamical systems theory, in particular singularity theory, to investigate the generic properties of the model, as well as to determine the critical sizes of the compost piles under various conditions.

## Keywords

analyse, theory, singularity, piles, compost, heating, self, model, uniform, spatially

## Disciplines

Physical Sciences and Mathematics

▼ Basic Description

Title	East-West Journal of Mathematics
ISSN	1513-489X
Publisher	Chiang Mai University * Faculty of Science
Country	Thailand
Status	Active
Start Year	1974
Frequency	Semi-annually
Language of Text	Text in: English
Refereed	Yes
Abstracted / Indexed	Yes
Serial Type	Journal
Content Type	Academic / Scholarly
Format	Print
Website	<a href="http://math.chiangmai.ac.th/index_files">http://math.chiangmai.ac.th/index_files</a>
Description	Publishes research papers, survey papers, or research announcements in pure and applied mathematics.
